ROAS to profit: the 10-step checklist

A 3x ROAS can still lose money. Use this with the Marginwise Profit Calculator to find what your ads actually earn after every cost.

Check over-attribution with your own data. Compare platform-reported revenue with Shopify orders from the same campaigns, run a post-purchase 'how did you hear about us' survey, or hold out a region for two weeks.

Gather your numbers (last full month)

- [ ] Ad spend and the ROAS each platform reports
- [ ] Average order value after discounts
- [ ] Return and refund rate
- [ ] Product cost (COGS) as a percentage of revenue
- [ ] Shipping and fulfilment cost per order, and payment processing fees

Run the calculator

- [ ] Enter the numbers on the ROAS to Profit tab
- [ ] Set over-attribution to your own estimate; vendor estimates range from 20% to 40%
- [ ] Read three outputs: true ROAS, contribution per order after ads, and break-even platform ROAS

Act on it

- [ ] Set every campaign's target ROAS above your break-even, not at a round number
- [ ] Review contribution after ads every week alongside ROAS

Want us to run it with you?

Comment **PROFIT** for the calculator, or book a free 30-minute call at **marginwise.in** and we will go through your numbers together.

Over-attribution range: vendor estimates (Luca, citing the Ecom CFO 2026 report); not independently verified. Calculator defaults are an example store, not benchmarks.
